```
# R doesn't read this "comment", because it has a hash at
# the front. Using comments is really important in real
# data analysis, because it's very easy to forget what
# you're doing or why
```

```
# create a vector
x <- c(3,4,6,1,2)
```

```
# multiply it by 10 and store it
y <- x * 10
|
```
